

# ThoughtBubbles

Thought Bubbles is an interactive experience with a big ATTRACT impact. Using motion tracking and augmented reality to create directed messaging that mirrors the trade show attendee within the experience, makes for an effective sponsorship opportunity. The interaction is effortless with zero barrier to usage.

Thought Bubbles expands your trade show reach by targeting and capturing everyone who comes by your booth. When an attendee walks in front of the kiosk, they appear on screen with a funny, informative or charming thought bubble displayed over their head. The bubble moves with them, following them within the frame, until they move out of view.

Get more people to engage with your booth staff, without bombarding them with aggressive sales tactics. Thought Bubbles creates a more receptive attendee, and gives your team an easy talking point to start a conversation.
